This slick and unique adapter converts optical digital sound signals – referred to as Toslink or SPDIF into wireless Bluetooth stereo sound signals transmitted to Bluetooth stereo headset, Bluetooth docking stations or Bluetooth speakers.

With your TV and a pair of good Bluetooth headset, you can now enjoy your TV excellent sound in stereo!

With a super TV picture – you deserve matching quality sound – and good sound is half the enjoyment when watching your favorite TV show.

The installation is a snap without any use of tools. Operation could not be simpler!

No button to push – no battery to install!

TosBlue has been on the market just for a short time. Based on the feedback from satisfied customers in more than 40 countries, the product is already a success!

Therefore, also you ought to look for this output jack on the back of your flat screen TV.....

Then, if you find the plug on your TV, you should consider ordering TosBlue today!

## The TosBlue concept

The TosBlue X unit transforms the optical digital sound signal from your new TV to Bluetooth signals which are wirelessly transmitted to a Bluetooth sound product.

Look for the Toslink plug on the back of your TV. It looks like shown on the picture.

The receiving device may either be a Bluetooth headset or another Bluetooth product. When you use a good stereo Bluetooth headset, you will experience fantastic sound from your own TV – in stereo!

## Alternate input

The unit is additionally equipped with a 3.5 mm line-in input. A stereo cable may be connected between the unit and the output of an older TV – or other sound devices - lacking Toslink output. The principle of use is the same.

## User advantages you will appreciate

When TosBlue is installed on your TV and you are enjoying to the TV sound via a good pair of Bluetooth headset, you may enjoy the following benefits:

### Installation is a snap

No tools required. No special skills required. All you need is included.

### Easy to operate

No buttons to push – no batteries to install. Always ready.

### Super stereo Sound

By listening to the TV sound via a good Bluetooth headset, the sound will be experienced in stereo. Normally, the sound from the internal TV speakers is perceived by you as mono. The difference can't be explained – it must be experienced!

### Do not disturb others

If you want to experience your favorite TV show without disturbing others. Then TosBlue with a good Bluetooth headset is the solution. You may reduce, or completely mute, the sound from the TV's internal speakers, and receive the sound via your Bluetooth headset.

### Not disturbed by others

You may be attending your favorite TV show. Other persons in the room may be talking and children playing. By using TosBlue and a good Bluetooth headset the surrounding noise will be considerably reduced so you can enjoy your TV show practically undisturbed.

### You do not disturb your neighbor

Impaired hearing is normal when we grow older. When we watch TV, we tend to turn up the sound – often so loud that the neighbors also can listen in. Using TosBlue with a Bluetooth headset - even persons with impaired hearing - may follow the TV show without disturbing the neighbors.

## Design

The functional and beautiful design with the extraordinary simple User Interface (UI) is created by the award winning Danish designer Steve McGugan. ([www.mcgugan.dk](http://www.mcgugan.dk))

## Background

Most new flat screen TVs are equipped with an optical digital output plug on the back. This output is referred to as Toslink or SPDIF. The purpose of this output is to give the user the opportunity to send out extra TV sound to an amplifier connected to external speakers. This way a better and more powerful

sound from the TV set is achieved. This solution requires that the amplifier is equipped with Toslink input – and it may be a very costly solution.

If you do not have this type of amplifier – TosBlue may be the solution for you – a solution you can afford.

## Installation

The installation is done in a minute without use of any tools. No special skills are required. All you need - cables and Velcro - is included.

*When installed on back of your new flat screen TV, ThosBlue may look like this - as viewed from the back.*

You fasten the TosBlue unit to the back on your sending equipment (TV) with a Velcro pads as illustrated. Proceed to connect the 2 cables, the USB cable for power and the optical cable for signal.

The unit is now ready for use.

## Operation

TosBlue is furnished with NO buttons and needs NO user attention. When the TV, or other sending device is turned ON, Tosblue will also be automatically turned ON. TosBlue will enter pairing mode and remain in this mode until paired with a Bluetooth device. The LED located on top of the unit will indicate the status.

Complete User Guide is printed on the package.
